## Summary

Software engineering student at Pokhara University with internship experience working on Django REST APIs, a Next.js website and Flutter app screens. I enjoy backend work: data modelling, permissions and business rules that hold up when something goes wrong. Looking for an internship or junior role in backend or full-stack development.

## Experience

**Backend Development Intern**, Nep Tech Pal Pvt. Ltd., Pokhara (May to August 2026)

- Worked on Django REST Framework APIs for company projects, including authentication, tokens and data handling, and tested endpoints with Postman, Swagger and GitHub.
- Contributed to the Leo Club of Chautari Pokhara website (leoclubofchautaripokhara.com) using Next.js and Django.
- Built Flutter mobile app screens for the company's office management system and integrated them with the existing Django APIs.

## Projects

**Restaurant Ordering System** (personal project, Flutter app in progress). Django REST Framework, PostgreSQL, Cloudinary, Flutter.

- Built the complete backend: JWT login with customer, staff and owner roles, menu with image uploads, cart and orders.
- Orders are saved in a single database transaction. Totals are calculated on the server and each item's price is stored at the time of the order.
- Order status can only move through valid steps and only staff or the owner can change it.
- Cash on delivery and eSewa (test mode) payments, with eSewa payments verified by the server. API documented with Swagger. Code: github.com/bhandarisatkriti/Restaurant_app_backend

**SkillSync AI** (university team project). Django, Django REST Framework, FastAPI, Sentence Transformers, FAISS, Gemini API.

- Collaborated on a platform that parses a CV, generates an ATS-friendly CV from a structured profile, finds skill gaps with sentence embeddings and FAISS similarity search, and recommends jobs scored against the candidate's skills. Code: github.com/bhandarisatkriti/Project-II

**Expense Tracker** (first college project). Flutter, Dart, Hive.

- Flutter app with sign up, login, a home page and logout. User accounts are stored on the device with Hive, so they stay after the app restarts. Code: github.com/bhandarisatkriti/Expense-Tracker

**Event Management API** (practice project). Django REST Framework, JWT, Swagger.

- Token login, serializer validation, media uploads and API documentation.

## Skills

**Backend:** Python, Django, Django REST Framework, JWT authentication, serializers, permissions, REST API design, Celery, Redis, FastAPI
**Data:** PostgreSQL, SQLite, relational data modelling, database transactions
**Mobile and web:** Flutter, Dart, Hive, Next.js, React, HTML, CSS
**Tools:** Git, GitHub, Postman, Swagger, Redoc, Docker, Cloudinary
**Additional:** API integration, debugging, authentication and authorization, API documentation, teamwork

## Education

**Bachelor of Software Engineering**, Pokhara University, Nepal (2022 to 2026)

## Certifications

- **Flutter Essentials**, Des Vu Technologies (3-month course, August to November 2024)
- **Full Stack Web Development with Python Django**, Swift Academy (2-month course)
- **Cloud and DevOps Technology**, Pokhara University (30-hour workshop)
- **Security Analysis and Risk Management**, Lifelong Learning course
